Linux Commands - Overview  
with Examples - we can create a  
new alias using alias command,  
The syntax would look like this :

Syntax: alias

[alias\_name]=[Command for

which you want to set alias] For example, we know that  
ifconfig command is used to  
check IP Address information.

Here I am going to set an alias for  
ifconfig as showip. That means  
when I type showip instead of  
ifconfig it will show the IP  
Address information. Tue, 24
