youâ€™re in the grip of the

Menopause, perimenopause and postmenopause are stages in a woman's life when her monthly period stops. This is the end of a woman's reproductive years. Perimenopause is the first stage in this process and can start eight to 10 years before menopause. Menopause is the point when a woman no longer has menstrual periods for at least 12 months. Menopause, Perimenopause and Postmenopause - Perimenopause happens years before menopause actually begins in a woman's body. This is the time when the ovaries start to make less estrogen. It generally starts in a woman's 40s, but can start in some women in their early 30s. Perimenopause will continue until menopause actually begins in a woman. The average length of time is 4 years, but it ... Are You Experiencing Perimenopause? - Women.com - Natural menopause occurs when levels of oestrogen and progesterone decline naturally.; Premature (early) menopause is when periods stop before the age of 40 years. This can be due to many reasons including medical conditions such as diabetes or underactive thyroid (hypothyroidism), and surgery or medications that have affected the blood supply to the ovaries.
